Who makes permanent magnet generators for wind turbines?

ABB has been developing and delivering permanent magnet generators for wind turbines since 2000, helping turbine manufacturers remain both on schedule and within budget. Leading wind turbine manufacturers trust ABB's expertise, and today most of the megawatt-class permanent magnet generators operating in Europe and North America were built by ABB.

What is a permanent magnet generator?

Permanent magnet generators provide the ideal solution to the wind industry. By matching the power and speed of the generator to that of the wind turbine, the power system becomes more efficient. No gearboxes are needed. The efficiency of the alternator exceeds 90%.

Are permanent magnet DC generators a good choice for small scale wind turbines?

The permanent magnet DC generator is a good choice for small scale wind turbine systems as they are reliable, can operate at low rotational speeds and provide good efficiency especially in light wind conditions as their cut-in point is fairly low.

Are permanent magnet synchronous generators suitable for wind energy conversion systems?

Over the last few years, wind generators based on permanent magnet synchronous machines (PMSMs) are becoming the most popular solution for the modern wind energy conversion systems (WECSs). This paper presents a concise review of the grid-integrated WECSs employing permanent magnet synchronous generators (PMSGs).

Which magnet is used in a wind turbine?

Rare earth magnets, such as neodymium magnets, are used in some of the world's largest wind turbines. These magnets are the strongest permanent magnets on the market because they include neodymium, iron, and boron.

Why is a permanent magnet synchronous generator used in a wind turbine?
