

Wind power generation chart

Will solar and wind energy lead the growth in US power generation?

Solar and wind energy will lead the growth in U.S. power generation for at least the next two years, according to EIA estimates. This report uses data from the EIA to analyze solar and wind capacity and generation over the past decade (2014 to 2023) in all 50 states and the District of Columbia.

How many kilowatt-hours do wind turbines generate a year?

Total annual U.S. electricity generation from wind energy increased from about 6 billion kilowatt-hours (kWh) in 2000 to about 434 billion kWh in 2022. In 2022, wind turbines were the source of about 10.3% of total U.S. utility-scale electricity generation.

How has wind power changed over the past 30 years?

Wind electricity generation has grown significantly in the past 30 years. Advances in wind-energy technology have decreased the cost of wind electricity generation. Government requirements and financial incentives for renewable energy in the United States and in other countries have contributed to growth in wind power.

How many meters of wind energy are there in the world?

Wind Energy Maps and Data offer results for 140-Meter wind potential and other wind speeds. Search by Keyword, view Data by State, or refer to the Tutorial: Understanding Wind Resource Maps. Specific Power is an important trend in wind energy.

What percentage of electricity is produced by wind?

Wind accounts for around 12% of the nation's capacity from all utility-scale electricity sources (including renewables and fossil fuels such as coal, oil, and natural gas). In 2023, around 10% of electricity in the U.S. was produced by wind. A decade earlier in 2014, wind accounted for 4% of the total electricity generated.

Where do solar and wind power data come from?

All national and state-level data come from the U.S. Energy Information Administration (EIA). Utility-scale solar and wind summer capacity values for 2014-2022 are as reported in EIA's Historical State Data for each year.

Record-breaking wind turbine installations in 2020 and 2021, primarily in the Central and Midwest regions, have increased U.S. wind energy generation by 30% to 135.1 GW. In 2020, the U.S. increased wind turbine ...

In the final months of 2020, electricity generation from wind turbines in the United States set daily and hourly records. Hourly data collected in the U.S. Energy Information ...

Because Texas leads the nation in wind energy generation, it makes sense that the state is also a leader in the number of wind turbines. The Lone Star State has more than 19,000 active wind turbines, according to the ...

Wind power generation chart

Therefore, for small wind generator applications, 30- to 40-m wind maps are far more useful than 10-, 60-, 80-, or 100-m wind maps. It is also important to understand the resolution of the wind map or model-generated data set. ...

A modern wind turbine is a device that converts wind energy into electricity and wind farm (wind power plant) is an assembly of wind turbines that are site operated for the generation of ...

Find maps and charts showing wind energy data and trends. Filter by Turbine Hub Height. ... U.S. Installed and Potential Wind Power Capacity and Generation . Last updated 6/21/2022. ... U.S. Wind Power Technology ...

Step-by-step look at each piece of a wind turbine from diagram above: (1) Notice from the figure that the wind direction is blowing to the right and the nose of the wind turbine faces the wind. (2) The nose of the wind turbine is constructed ...
