Are there homes with solar panels available?

77 percent of Realtors indicate that there are homes with solar panels available in their local markets. Currently, solar energy produces over 4 percent of all electricity in the U.S., according to the Solar Energy Industries Association (SEIA).

Is buying a home with solar panels the right move?

Currently, solar power accounts for just 3.9 percent of total U.S. electricity generation, but that number is rapidly growing. So is buying a home with solar panels the right move for you? Well, that depends on some key factors.

Should you sell a house with solar panels?

When you're ready to sell, you'll be happy to know that homes with solar panels sold for 4.1 percent more than similar properties without solar systems, according to a recent study from Zillow. Solar panels never go out of style and can yield consistent benefits for anyone living under the roof.

Are solar panels transferable in a home sale?

The homeowner doesn't own the panels since they're tied to the property. This means they're easily transferable in a home sale. If you don't want to shell out for a solar panel system, you can lease the panels (or the electricity they produce) from a third party.

Who owns solar panels if a home is sold?

If the seller of the home owns the solar panels and is still making payments through a loan or through financing, you'll want to know the details as the buyer. If the panels were financed through a solar loan, the loan will remain the seller's responsibility, even if the property is sold.

Can you buy a home with leased solar panels?

However, there won't be any tricky ownership issues. If the seller financed their solar panels through a loan, you can transfer the loan to your name during the home purchase. You'd need to pay off the remainder of the loan, but you'd still own the panels once you buy the home. It is possible to buy a home with leased solar panels.
