

Is it suitable for individuals to install solar power generation

Should you choose solar energy for your home?

Before starting the process of powering your home with solar energy, homeowners should investigate their energy use and consider potential efficiency upgrades. Homeowners should be well aware of their total electricity usage, and consider low-cost and easy-to-implement efficiency measures before choosing solar.

Why should you choose a home solar installation service?

Home solar technology offers electricity bill savings, more energy independence, and resilience in the face of an increasing rate of power outages. For the environmentally conscious, it provides an eco-friendly alternative to existing electricity sources. But shopping or even researching home solar installation services can often feel daunting.

Should you go solar if your home is not suitable for solar?

If your home is not suitable for rooftop solar, you can still get the benefits of clean energy by investing in a community or shared solar program. By going solar, you can play an active role in achieving the nation's goal of a carbon-free electricity sector by 2035. For more information, visit the Homeowner's Guide to Going Solar.

Should I add a solar energy system to my roof?

You may be considering the option of adding a solar energy system to your home's roof or finding another way to harness the sun's energy. While there's no one-size-fits-all solar solution, here are some resources that can help you figure out what's best for you. Consider these questions before you go solar. See the Spanish version here.

How do I choose the best way to use solar electricity?

Before deciding on the best way to use solar electricity at home, assess the potential solar energy that can be produced at your address. Because PV technologies use both direct and scattered sunlight to create electricity, the solar resource across the United States is ample for home solar electric systems.

Can I install my own solar panels?

Although DIY options are available, hiring a professional solar company is best to ensure your panels are correctly and safely installed. Yes, it's possible to install your own solar panels. However, DIY installations require electrical skills and advanced knowledge of solar energy that most DIYers don't have.
