

Microgrid Consulting

Who is microgrid labs?

Welcome to Microgrid Labs, specialists in Planning and Modeling of Fleet Electrification, Charging Infrastructure and Microgrid projects. We take the complexity out of fleet electrification and microgrid planning. We help assess your needs, analyze current state of operations, model future scenarios and help design the most economical solution.

What is defined as a microgrid?

According to the Department of Energy (DoE), a microgrid is defined as 'a group of interconnected loads and distributed energy resources within clearly defined electrical boundaries that acts as a single controllable entity with respect to the grid'. This definition outlines a microgrid as a self-contained system capable of operating independently from the main power grid or in parallel with it.

What is a microgrid & why should you invest in them?

Microgrids are a particularly attractive solution. Microgrids can integrate multiple distributed generation sources including conventional diesel and gas, and/ or renewables such as solar photovoltaic (PV), wind, hydroelectric, tidal and even thermal schemes like combined heat and power (CHP), together with energy storage.

Are microgrids capital intensive?

Microgrids are capital intensive and come in different shapes and sizes. Selection and sizing of onsite generation and storage is critical to its performance and economic viability. Our data driven approach models demand and generation to derive the right balance of load, generation, energy storage to minimize capital and operating costs.

What services does ABB offer for a microgrid project?

ABB offers consultancy services throughout a microgrid project with the goal of finding the optimal solution that maximizes the value of the assets and financial investment.

How can ABB support energy storage & grid stabilization in microgrids?

For energy storage and grid stabilization in microgrids, ABB has developed a range of standardized, modular and scalable systems that provide effective 'plug and play' solutions for all applications. This compact, containerized approach ensures fast and easy transportation, installation and commissioning.

MGL has participated in a number of Microgrid projects with partners like LBNL (Lawrence Berkeley National Laboratory), EPRI (Electric Power Research Institute) and Navigant Consulting. Our projects are spread across the US and ...

Consulting Engineering. SDF Generator Plant Microgrid. Louisville Muhammad Ali International Airport

Microgrid Consulting

Louisville, Kentucky. Project At A Glance ... generation, battery energy storage, and microgrid controls. The scope of work includes: ...

Wunderlich-Malec's energy experts provide consulting services and mGrid®; software tools that optimize and make the best business case for building a microgrid energy infrastructure that delivers sustainable electric power ...

Microgrids are subsets of the regional electrical grid that have the ability to operate independent, or "island," from the local utility. Microgrids normally operate in parallel ...

Microgrids, energy systems that can operate off-grid or grid-parallel, play a key role in today's energy landscape. A well-designed microgrid combines the benefits of old and ...

"The resilient microgrid will be a significant benefit to our region, and we have found strong support among our local partners for this concept. The project design team is outstanding. We ...

We design, construct, maintain, build, commission, test, own, and finance microgrids using Energy as a Service using power purchase agreements; selling power back to the Utility. You get an energy efficient, resilient, ...
