

Use solar power to charge your phone

Can a solar phone charger charge a phone?

Solar panels on phone chargers are small -- meaning they can only catch so much of the sun, and thus their output is also small. A solar phone charger equipped with a battery pack can store power to use later, and thus kick out a higher wattage to charge your phone, quickly, and safely. See also: [What is a Solar Charger?](#)

How do solar phone chargers work?

Solar phone chargers use the same technology as regular solar panels but on a much smaller scale. The sun hits a small solar panel, which either charges a battery bank or directly plugs into and powers your phone, much like solar panels on your roof can power your home directly or charge a battery system.

How do I charge my phone with solar power?

The other option for solar charging is to use a setup designed for outputting higher power levels specifically to charge your phone. As mentioned above, to catch more rays from the sun, you need more surface area. Something like the Anker 515 24W solar charger will catch plenty of sunshine with its larger panels.

How to choose a solar phone charger?

It all comes down to finding the right balance between charging speed and available sunlight. Some popular solar phone chargers with different wattages include Anker 21W and BigBlue 28W USB Solar Charger. These chargers are known for their efficiency and reliability when it comes to converting solar energy into electricity for charging phones.

Why should you use a solar phone charger?

It's important to note that the size of the solar panel and its wattage also play a role in determining charging speed. So whether you're hiking under clear skies or on a cloudy day, using a solar phone charger allows you to harness renewable energy for your device.

How do you charge a solar phone without a battery?

The most portable method is using a purpose-built solar phone charger with or without a built-in battery bank, allowing you to charge your phone when there is no power outlet around. The third, least consistent method is to charge your phone directly from a small solar panel using a 12v connector.

When you are traveling or camping, it is important to have a backup power source. Before using the solar charger, fully charge the power bank using a wall outlet or USB port. You can also harness sunlight to charge the ...
